GAZETTEER TO MAPS OF KOREA

VOLUME I

NAMES SOUTH OF 37° LATITUDE

AMS 2
SEPTEMBER 1950

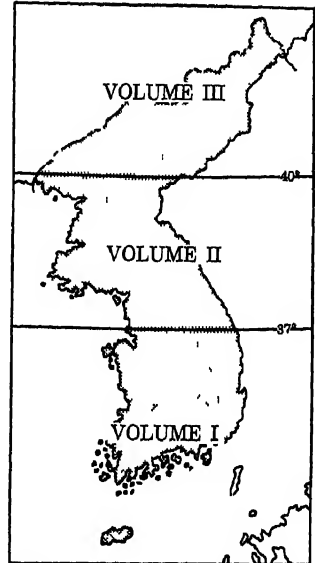

ARMY MAP SERVICE
CORPS OF ENGINEERS
DEPARTMENT OF THE ARMY
WASHINGTON 16, D. C.

This gazetteer supersedes the September 1944 edition
of Gazetteer to Maps of Korea, key number 201280

GAZETTEER TO MAPS OF KOREA

Names in this gazetteer appear on the latest issues of Army Map Service map series L751, Korea 1:50,000; L552, Korea 1:250,000 and several sheets of L542, Manchuria 1:250,000. The indexes at the back of this gazetteer show the locations of the sheets.

Volume Numbers.—This gazetteer consists of three volumes as shown in the accompanying diagram. Volume I contains the names appearing on the maps which lie below 37° latitude. Volume II contains the names appearing on the maps which lie between 37° and 40° latitude. Volume III contains the names appearing on the maps which lie above 40° latitude. A single volume may be published in several parts (books) in which case each part is simply a continuation of the preceding part.

Romanization.—All place names listed are based on the McCune-Reischauer system of romanization. Results of the Korean Names Survey prepared by the Far East Command have been incorporated in this gazetteer. This survey increased the number of vernacular readings for Korean place names thereby providing a more localized spelling than had previously been possible with only the Sino-Korean readings.

Alphabetization.—The alphabetizing has been accomplished by electro-mechanical methods and as a consequence certain irregularities will be noted which deviate slightly from a strict alphabetical order. The deviations will occur in the order of aspirated and hyphenated names since these marks were treated as spaces in the machine tabulation and consequently ignored in alphabetization. In almost all cases where these irregularities occur the name in question will appear within a few lines of its proper alphabetical order.

Column I, Name.—Names are listed in the same form in which they appear on the maps of Army Map Service Series L751, L552, and L542.

Column II, Designation.—For key to abbreviations used as designations see the accompanying LIST OF ABBREVIATIONS.

Column III, Grid Ref.—The grid reference for each name consists of a four-digit number prefixed by a two-letter "100,000 meter square identification." The grid reference may be used as an aid in locating the named feature on the maps in the following manner:

iii

KANSAS CITY, MO. PUBLIC LIBRARY

0 0001 0144465 1

a. On 1:50,000 scale maps first locate the north-south grid line which is labelled with the grid values whose two large figures (ignore small figures) correspond to the first and second digits of the grid reference in the gazetteer. Second, locate the east-west grid line which is labelled with the grid values whose two large figures (ignore small figures) correspond to the third and fourth digits of the grid reference. The named feature will be found in the immediate vicinity of the intersection of these two grid lines. (The two-letter 100,000 meter square identification is to be ignored.)

b. On 1:250,000 scale maps the two-letter "100,000 meter square identification" which prefixes the numerical grid reference in the gazetteer must be used. To locate the named feature first find the area on the map bounded by the 100,000 meter (heavy) grid lines which is identified by the two letter identification. These letters appear on the face of the map at the intersections of the heavy grid lines and in the grid reference box in the margin of the map. Within this 100,000 meter square area the numerical part of the grid reference is then used as follows.

(1) Locate the north-south grid line which is labelled with the grid value whose one large figure (ignore small figures) corresponds to the first digit of the grid reference in the gazetteer. Then, locate the east-west grid line which is labelled with the grid value whose one large figure (ignore small figures) corresponds to the third digit of the grid reference. The named feature will be found in the immediate vicinity of the intersection of these two grid lines. (Note that the second and fourth digits of the numerical grid reference are ignored.)

Column IV, 1:250,000 Sheet No.—The 1:250,000 sheet number is listed only when the named feature appears on the 1:250,000 scale map. The sheet number shown in the gazetteer is a slight modification of the number as it appears on the map. For example, the sheet number listed as NJ 52 14 in the gazetteer would appear on the map as NJ 52-14.

Column V, 1:50,000 Sheet No.—The sheet number shown in the gazetteer is a modification of the number as it appears on the map due to limitations of the machine tabulation. The variation occurs in the last digit of the number shown on the gazetteer listing. On the map this digit appears as a roman numeral. For example, the sheet number listed as 6821 4 in the gazetteer would appear on the map as 6821 IV.

Column VI, Lat.—The latitude of the named feature is listed to the nearest minute, in degrees-minutes, as scaled from the map.

Column VII, Long.—The longitude of the named feature is listed to the nearest minute, in degrees-minutes, as scaled from the map.

LIST OF ABBREVIATIONS

NOTES

1 The designation AN (Area name) refers only to the name shown on the 1 50,000 scale maps. When a 1 250,000 scale sheet number is also listed with a name carrying an AN designation it usually means that the name will appear labelling a settlement on the 1:250,000 scale map since area names are not shown on these maps.

2. Political names, with the exception of MYŌN names which do appear on the 1 50,000 scale maps, will not be found on the face of the maps in the positions indicated by the geographic coordinates or grid references. The positions indicated for these names are arbitrary points within the area covered by the political division whose limits are indicated by boundaries on the face of the maps at both scales and also in the Index to Boundaries diagram in the margin of the 1:50,000 scale maps.
